A pulsed design feature ensures that Amaron Quatro™ batteries perform predictably and reliably every time.

- A unique ventilation system ensures safety for positive grids, to increase cycle life in demanding environments.
- High-density profile reduces lower internal resistance and spacers high cycle performance.
- Interchangeable兴旺 allows easy repair for extension maintenance access.
- Low self-discharge rate for extended storage permitted.
- Conforms to international standards.
- Design life of 10 years.
- Clean and easy lock.

**Designed for the main action.**

Since Amaron Quatro™ batteries are specifically designed for UPS application, it offers you the right choice, no matter what your power handling power needs.

- The package is optimized with an L-shaped terminal block that provides a rugged, quick fit, with terminals that ensure optimal protection and performance.
- Every terminal is covered too. Amaron Quatro™ is compact, lightweight, and easy to handle, especially when assembly-friendly.

**Convenience features.**

Apart from the terminal block, it has an additional safety norms. This is a one of the largest and most comprehensive facility in the leading German Atlantis. Our Battery Storage Centre ensures that we set industry benchmarks.
